Salma BABA

DevOps & DevSecOps Engineer - CI/CD, Python automation, software for regulated environments

Open to full-time roles · MSc-level Engineering Degree, Polytech Marseille (Jul 2026) · Available now · Aix-Marseille, France
salma2002ba@gmail.com | LinkedIn | salmababa.com | +33 7 69 88 56 40

PROFILE

Software engineer and Polytech Marseille graduate (July 2026) with three years of hands-on experience in automation, infrastructure and software development on a mission-critical information system in a regulated nuclear environment (CEA Cadarache). My research at Université de Montréal on build pipeline security led me to DevSecOps. I like to understand systems end to end, from the code to the infrastructure it runs on, and to ship reliable, well-documented solutions. I am currently upskilling on cloud (AWS, Terraform) and looking for a full-time DevOps engineer role in the South of France.

EDUCATION

Polytech Marseille — Marseille, France
Engineering Degree in Computer Science (MSc level) - work-study at CEA Cadarache — 2023 - Jul 2026

Aix-Marseille University — Marseille, France
Bachelor's Degree in Mathematics and Computer Science — 2020 - 2023

Lycée Moulay Ismail — Meknes, Morocco
Scientific Baccalaureate - Mathematics major — 2020

EXPERIENCE

Software & DevOps Engineer (work-study) — Sep 2023 - Aug 2026
CEA Cadarache (French Alternative Energies and Atomic Energy Commission) - LDCI lab — Cadarache, France

- Built CI/CD pipelines with GitLab CI: automated builds, tests and deployments, with sensitive data kept secure.
- Modeled and centralized the information system: migrated a legacy Access history to a PostgreSQL database through a Python ETL pipeline.
- Designed and shipped a dosimeter traceability application end to end (C#/.NET, WPF, MVVM, Entity Framework Core) in a regulated environment under ISO 17025 (COFRAC) accreditation, from software architecture to deployment.
- Integrated precision scales over a low-level serial protocol (MT-SICS) to automate the acquisition of metrology data.
- Ramped up independently on a complex business domain (nuclear dosimetry, gamma spectrometry) to deliver an information system aligned with field, quality and traceability constraints.

Research Intern - Cybersecurity & DevSecOps (international exchange) — May 2025 - Aug 2025
Université de Montréal — Montréal, Quebec, Canada

- Academic research on securing software supply chains through software diversity: analyzed attack vectors on build pipelines and modeled their attack surface.
- Brought the findings into real DevSecOps workflows: automated SBOM generation and vulnerability scanning in CI/CD pipelines.
- Migrated a Java build from Maven to Gradle and compared the generated bytecode to verify build equivalence.
- Worked in English within an international research team.

TECHNICAL SKILLS

CI/CD & DevOps: GitLab CI, GitHub Actions, Docker, Git, Linux (shell, scripting)

DevSecOps: SBOM, dependency and vulnerability scanning (Syft, Grype, Trivy), pipeline hardening

Languages & scripting: Python, Bash/Shell, SQL, C#/.NET, Java (Maven, Gradle), C/C++

Databases: PostgreSQL, MySQL, SQLite, MongoDB, Entity Framework Core

Currently upskilling: AWS (ECS Fargate, S3, IAM, CloudWatch), Terraform, Kubernetes

Practices: Agile/Scrum, Infrastructure as Code, technical documentation

LANGUAGES, SOFT SKILLS & INTERESTS

Languages: French - fluent · English - professional working proficiency · Arabic - native

Soft skills: Attention to detail · Ownership on long-running projects · International adaptability · Clear communication with technical and non-technical audiences

Interests: Generative AI & tech watch · Diversity in tech · Running & cycling · Dance
